Subject: RECOMMENDATION FOR STUDY ABROAD

Student Gorazd Čater was born on 10.6.1986 in Celje in Slovenia. At the moment he is a regular student in the third class of the Faculty of architecture in Ljubljana. He is applying for a student grant for study on TU Muenchen and I was asked for a recommendation letter. Student Gorazd Čater has successfully finished both subjects that I teach in the 1st and in the 3rd class related to statics and structural mechanics. In order to deepen his knowledge on constructions he voluntarily cooperated also in preparation of my recent text book in 2008. He focused his student research work on statics of arches and domes of various shapes and forms. He has proved to be inventive and intelligent student with great level of self independency and research capability. The results of his work have been included also in the final version of the student text book. He speaks fluently English and well German and I would kindly recommend him for further studies at TUM. For any further questions related to this matter please do not hesitate to contact me.

Ljubljana 9.3.2010
